PROFILE

AI Engineer with 2 years of experience building end-to-end AI systems across **Generative AI, Computer Vision, and Deep Learning**. Experienced in **LLM-based information extraction, RAG, AI agents, prompt optimization, model training, GPU inference, and AI application deployment** for complex real-world data.

PROFESSIONAL EXPERIENCE

Junior AI Developer 05/2025 – Present
Forage AI
- Developed Generative AI pipelines using LLMs, AI agents, and Traditional, Agentic, Graph, and Hybrid RAG architectures.
- Built LLM-based information-extraction workflows processing **300K+ documents** across complex financial data, achieving **90% extraction accuracy**.
- Designed scalable AI workflows for financial-data processing, evaluation, and deployment across complex real-world use cases.

Associate Engineer 11/2024 – 04/2025
ResoluteAI Software
- Developed and deployed Computer Vision and Generative AI solutions, including object detection, model training, and evaluation.
- Built GPU-optimized inference pipelines using **PyTorch and CUDA**, with **YOLOv8, OpenCV, and Pillow** for real-time image processing and detection.
- Developed interactive AI applications using **FastAPI and Streamlit** and containerized deployments with **Docker**.

PROJECTS

Hybrid RAG Enterprise Knowledge Assistant
- Built a Hybrid RAG system combining semantic and keyword search, achieving **95% answer accuracy** across **10K+ documents**.
- Developed a multi-format document ingestion pipeline supporting **handwritten, digital, and tabular documents** with source-grounded responses.

Automatic Prompt Refiner
- Developed a **ground-truth-driven prompt optimization system** for LLM-based information extraction.
- Implemented an iterative loop of **evaluation → ground-truth comparison → error analysis → prompt refinement → re-evaluation** to automatically improve prompt performance.

Computer Vision-Based Safety Compliance System
- Developed a Computer Vision system for industrial safety compliance, achieving **93% detection accuracy** across safety equipment and compliance categories.
- Implemented **YOLOv8-based object detection** with OpenCV and PyTorch to identify safety violations and automate compliance monitoring.

EDUCATION

B. Tech - CSE-Artificial Intelligence 2024
Medi-Caps University Indore, India

SKILLS

Machine Learning | Data Science | Image Processing | Computer Vision | Deep Learning | Model Training & Evaluation | Classification & Information Extraction | Large Language Models (LLMs) | Prompt Engineering | RAG (Retrieval-Augmented Generation) | AI Agents / Agentic Workflows | Vector Databases | Hybrid Search | Amazon Web Services (AWS) | Docker
